

## IMU (Inertial Measurement Unit) CAN INTERFACE

### ■ GENERAL DESCRIPTION

The M-G550PC2 is a small form factor inertial measurement unit (IMU) with 6 degrees of freedom: tri-axial angular rates and linear accelerations, and provides high-stability and high-precision measurement capabilities with the use of high-precision compensation technology.

A variety of calibration parameters are stored in memory of the IMU, and are automatically reflected in the measurement data being sent to the application after the power of the IMU is turned on.

With Controller Area Network (CAN) interface support for host communication, the M-G550PC2 reduces technical barriers for users to introduce inertial measurement and minimizes design resources to implement inertial movement analysis and control applications.

This unit is packaged in a water-proof and dust-proof metallic case. It is suitable for use in industrial and heavy duty applications.

The features of the IMU such as high stability, high precision, and small size make it easy to create and differentiate applications in various fields of industrial systems.

### A.2.1. Absolute Maximum Ratings

Table 2.1 Absolute Maximum Rating

Parameter	Term	Conditions	Range	Unit
Power supply voltage	V <sub>IN</sub>	CAN_V+ to CAN_GND	-0.3 ~ +32V	V
Port input voltage	V <sub>port</sub>	CANH/CANL to CAN_GND	-3 ~ +32	V
Storage temperature	T <sub>STG</sub>		-40 ~ +85	°C
Operating temperature1	T <sub>OPR1</sub>		-25~+70	°C
Operating temperature2	T <sub>OPR2</sub>	without mechanical actuation	-40~+70	°C
Storage humidity	H <sub>stg</sub>	no condensation	90 or less	% R.H.
Operating humidity	H <sub>opr</sub>	no condensation	90 or less	% R.H.
Acceleration / Shock		Half-sine 0.5msec	500	G

If the unit is operated beyond the absolute maximum rating, malfunction may occur or the unit may fail completely. Although the unit may appear to operate normally, reliability may decrease.

### A.2.2. Recommended operating conditions

Table 2.2 Recommended operating conditions

T<sub>a</sub>=25°C, V<sub>in</sub>=12V, R<sub>L</sub>=60Ω, unless otherwise specified; all voltages are defined with respect to ground

Parameter	Term	Condition	Min.	Typ	Max.	Unit
Power supply voltage	V <sub>IN</sub>	CAN_V+ to CAN_GND (*2)	9 <sup>(*)</sup>	12 (24)	30	V
Port input voltage	V <sub>PORT</sub>	CANH/CANL to GND	-2	-	7	V
Operating temperature	T <sub>OPR</sub>		-25	-	70	°C

(\*) When power supply voltage is 9V or less, the master may not be able to communicate with a node normally even if the run-LED turns on.

(\*2) The power supply voltage must reach the recommended operating condition within 2 seconds after power is applied to a node.
